## Together we can help avoid the spread of contagious pathogens in your facility!

The Storm family has served nursing homes in the southeast for over fifty years, dealing in the best possible hygiene equipment to bathe long term care residents.

The Storm Shower System greatly reduces the risk of contamination by sheer design. In addition to eliminating UTI's, the Storm Shower Chair provides a more comfortable experience for the patient and makes the job easier for the staff.

The long term care industry can save millions of dollars by lowering operating costs in facilities, such as treating easily avoidable UTI's. Using the Storm Shower Chair means that owners and operators will benefit on their MDS reports. They will get higher reimbursement rates for doing a better job of preventing Long Stay UTI's, and providing a safer and more comfortable experience for their residents.

**A recent scientific study at Tennessee Tech University has confirmed our claim. It looked at the UTI rates at 71 nursing homes who had used the Storm Shower Chair for more than one year. It found that there was a significant reduction in the UTI rates reported at those nursing homes, compared to the year prior to purchasing Storm Shower Chairs.**
